PLATINUM SERIES

Thermostat Controlled Electric Griddles 208V/240V, 1/3 Phase PT-G24-E, PT-G36-E, PT-G48-E

Patriot Platinum thermostat controlled electric griddles are designed for precise and efficient cooking. Thermostatic controls give cooks precise temperature regulation by allowing you to select specific temperatures. All Patriot Platinum griddles feature a highly polished 1" thick metal plate. Combined with the thermostatic controls, this gives you a flattop grill that will retain heat for long and intense service times, allowing you to set a temperature and not worry if your griddle surface will get too hot or cold. These griddles do not come with a plug and cord and need to be hardwired by a professional.

This item meets the sanitation standards imposed by the ETL, a division of the Intertek Group.

This item meets the electrical product safety standards imposed by the ETL, a division of the Intertek Group, for use in the United States and Canada.
